

EAM to Manage Upgrade

GA March 28, 2023

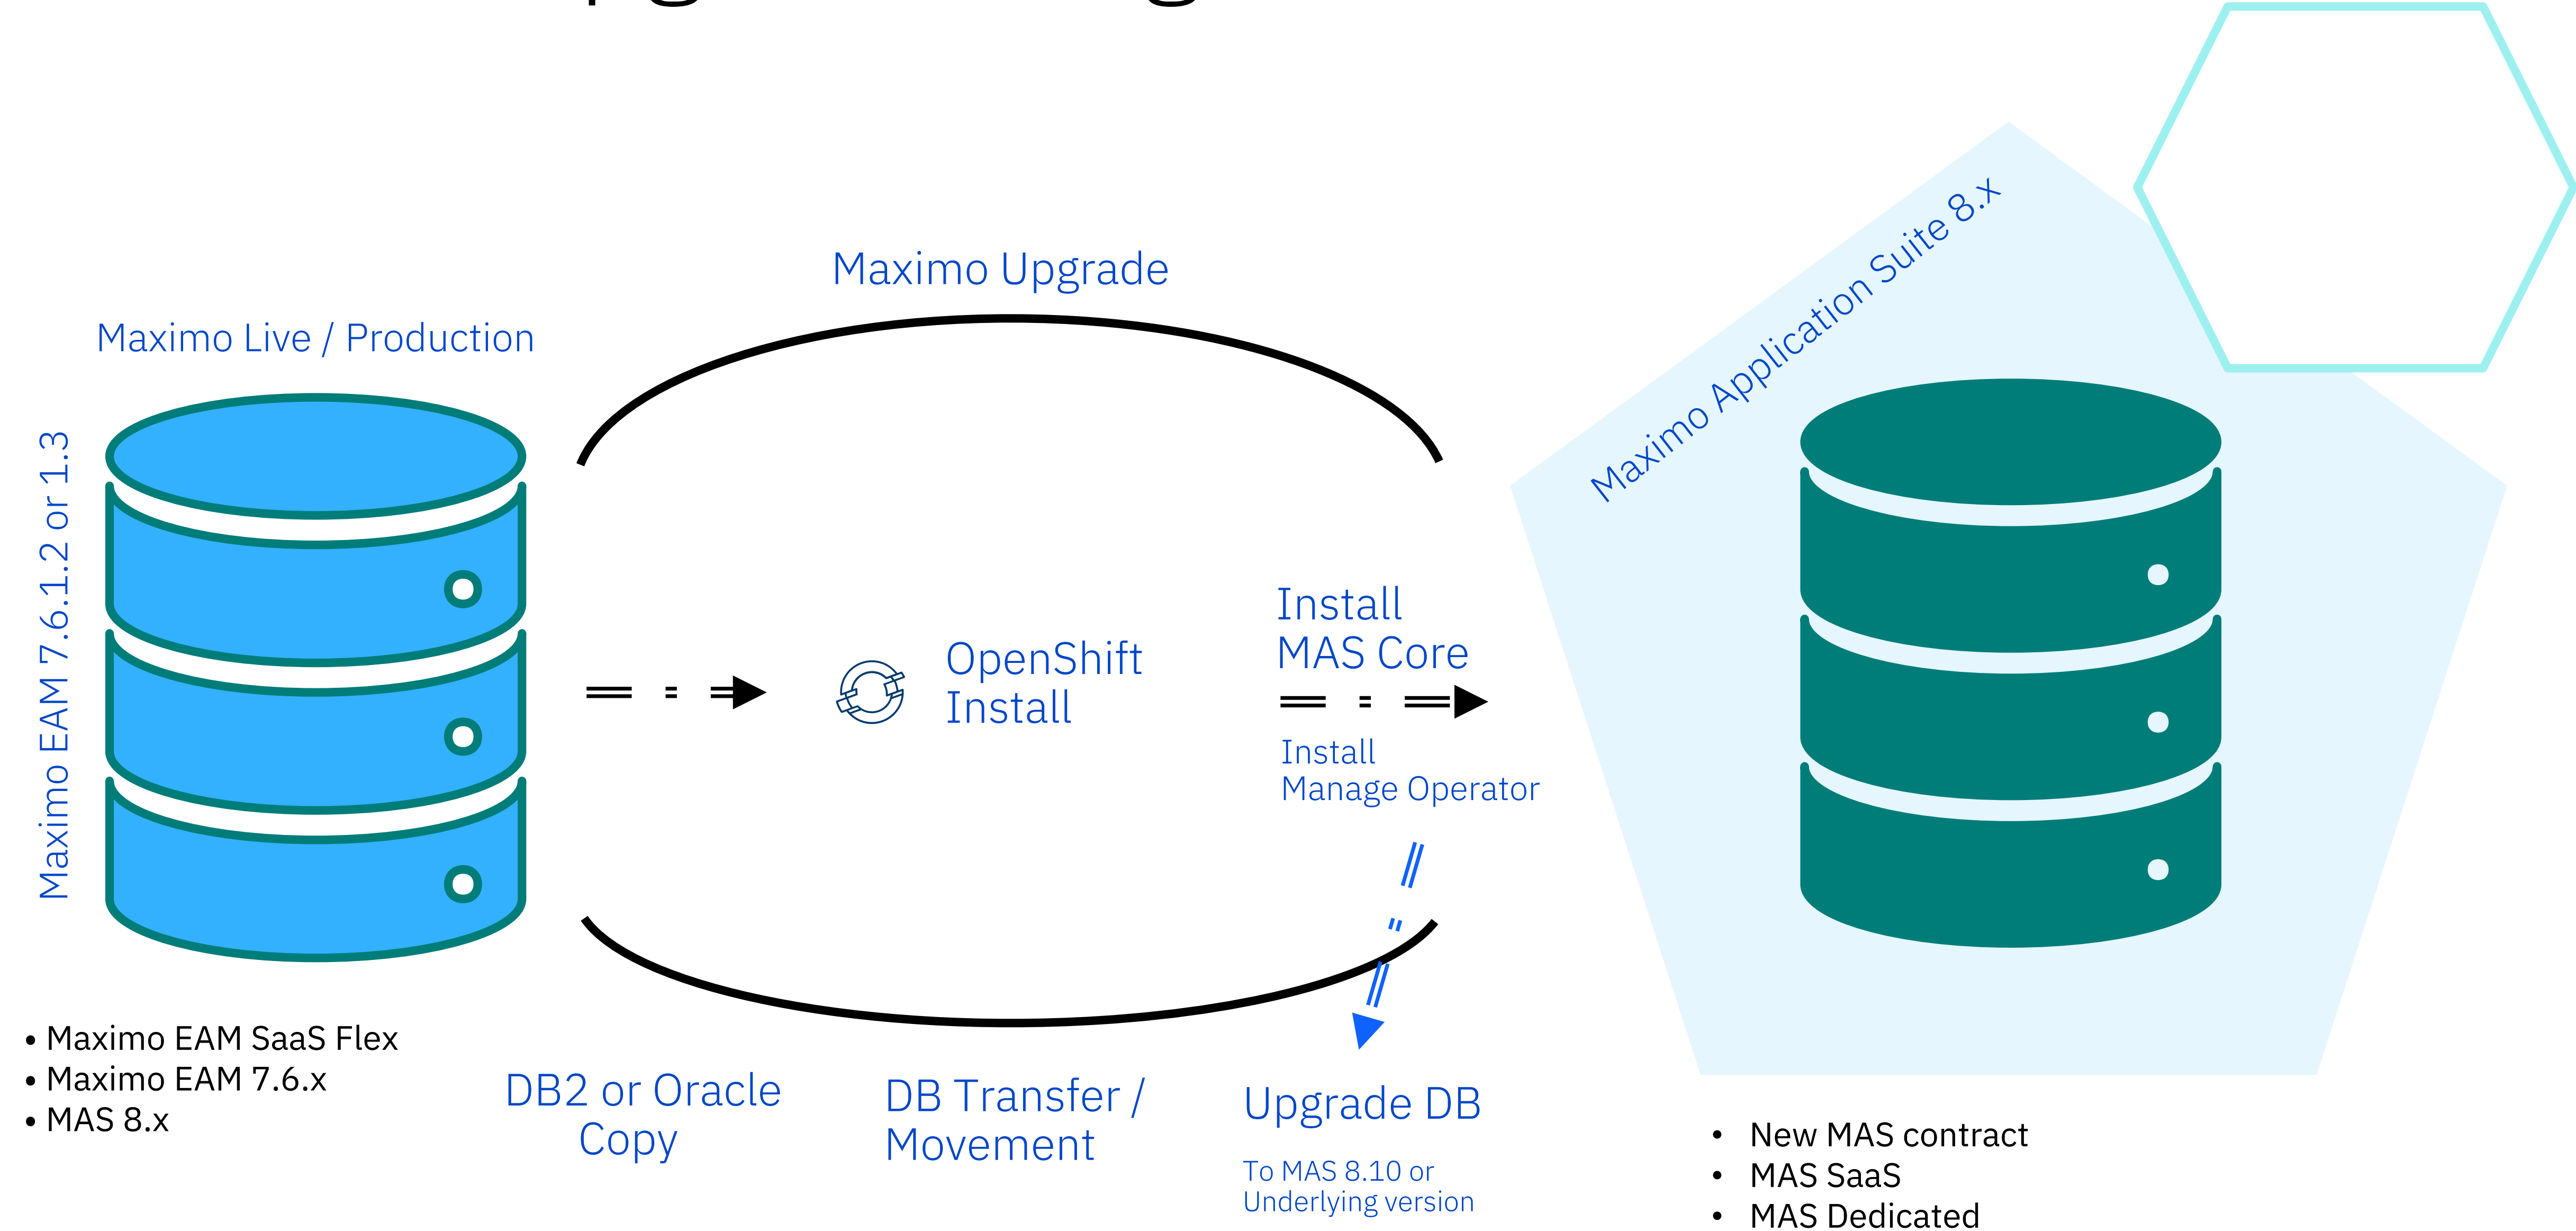

Agenda

Maximo EAM to Maximo Application Suite Upgrade / Migration

Different Options of Upgrade / Migration

Technical considerations for Upgrade / Migration

New MAS Upgrade / Migration

Pre-Conditions for Migration

Pre-
Conditions

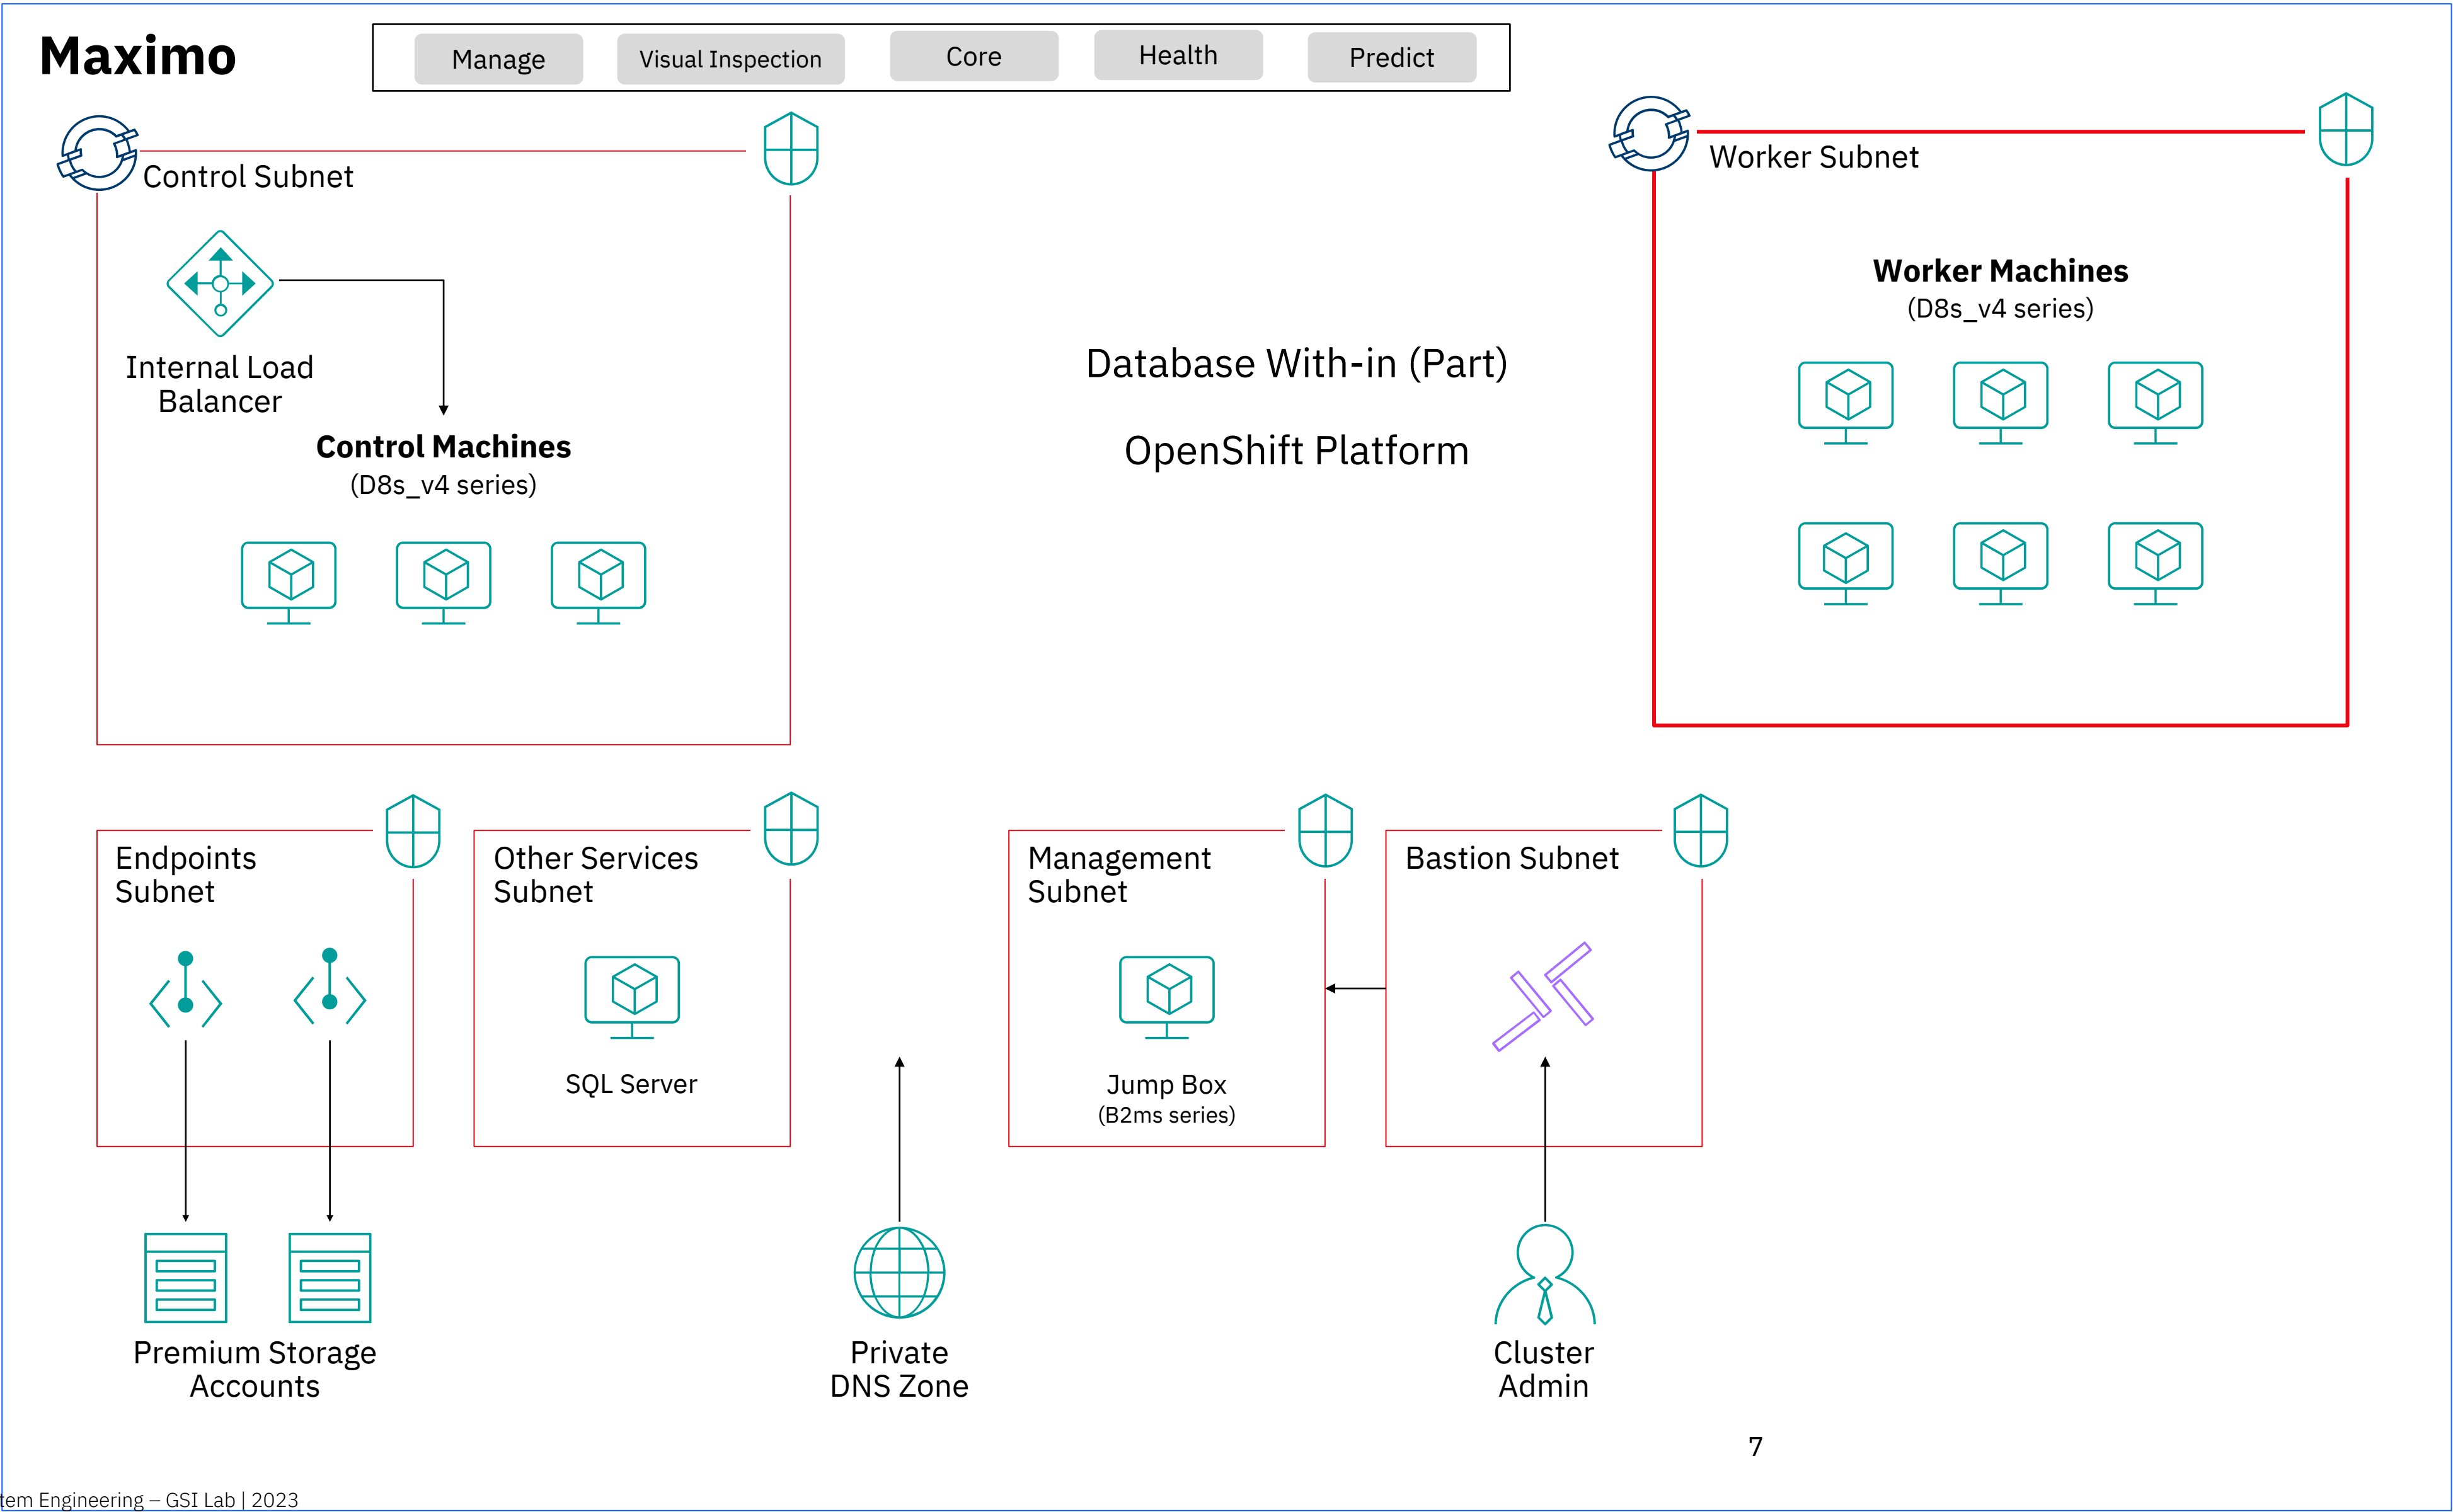

- Client must be on 7.6.1.2 / 1.3 (if existing SaaS Flex client, then upgrade part of the contract but must be scheduled if not already there). Upgrade cannot be part of the migration.
- For the Shared Cluster offerings (MAS SaaS), all JAVA code must be remediated – no customizations allowed
 - For MAS Dedicated best practice is to remediate all JAVA Code
- In case of SaaS must be on DB2 or be converted to DB2
- All integrations to be reviewed by Client (and designate, along with IBM to ensure there is no custom, non-standard connections (i.e., all integrations must go through the MIF).
- Anywhere and WorkCentre's are not supported in MAS after November 2022 – must be remediated by client prior to migration
- Fill out migration questionnaire in case of SaaS or SaaS Dedicated

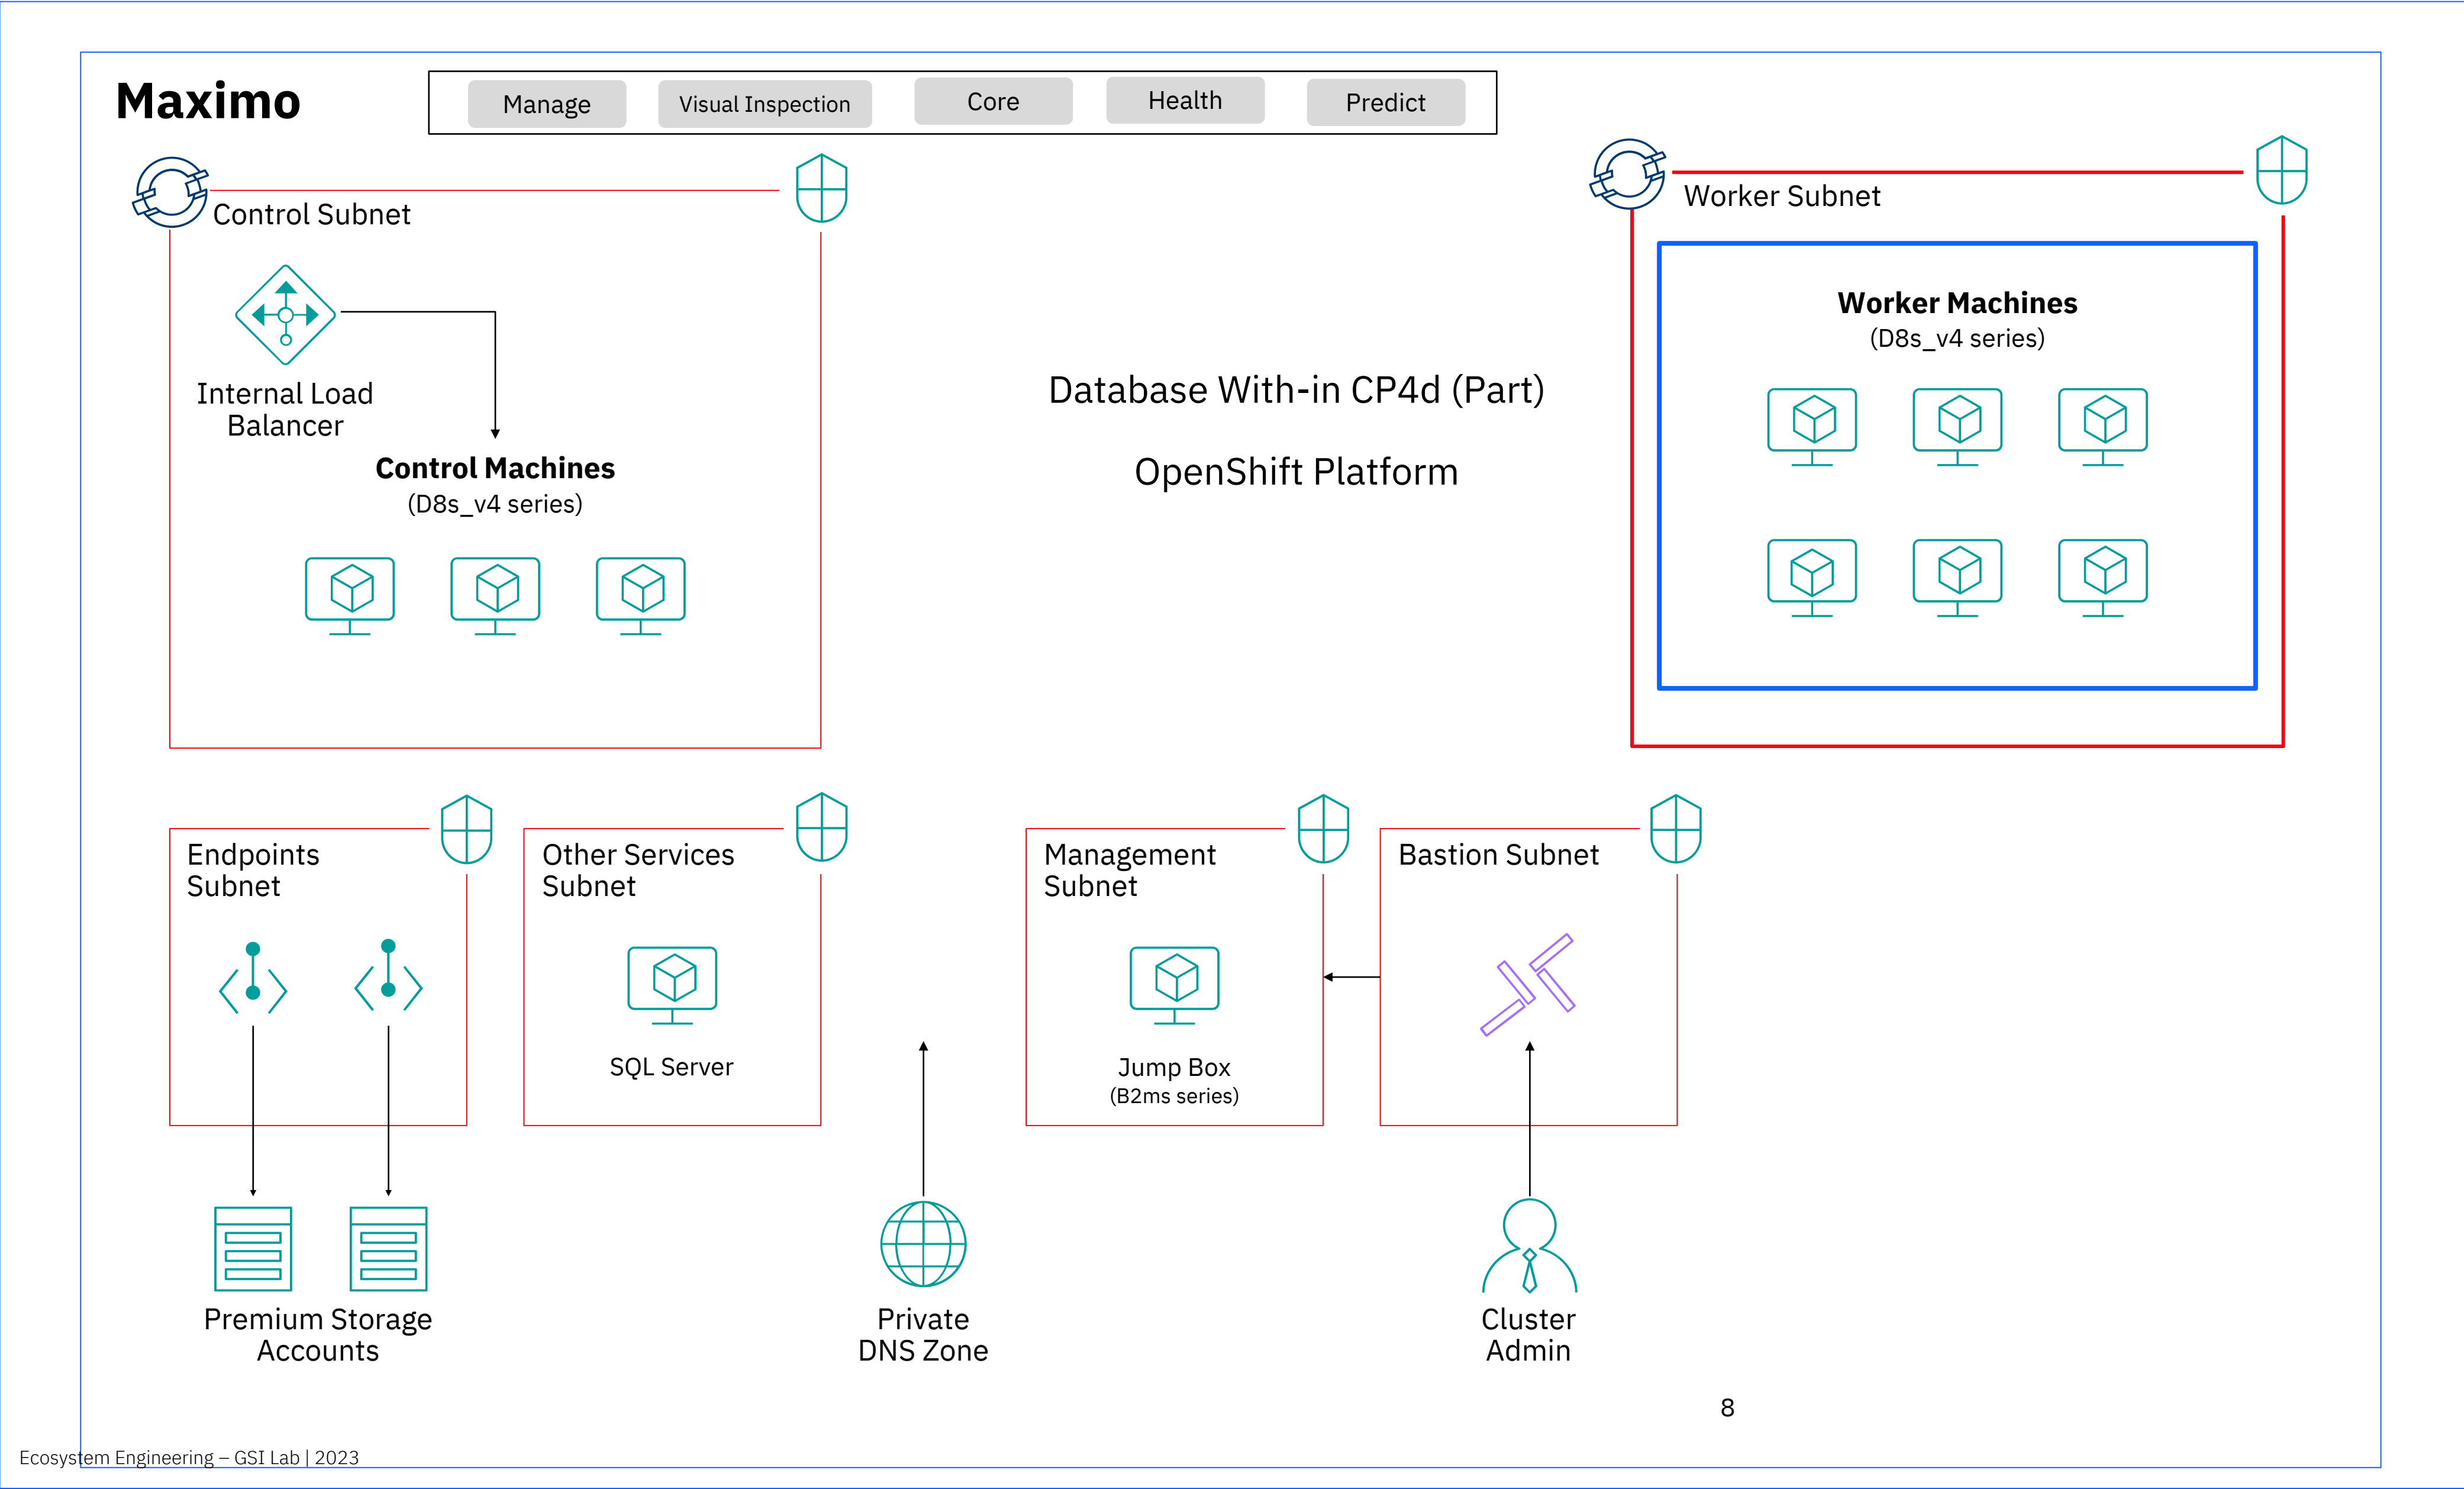

Steps for Migration

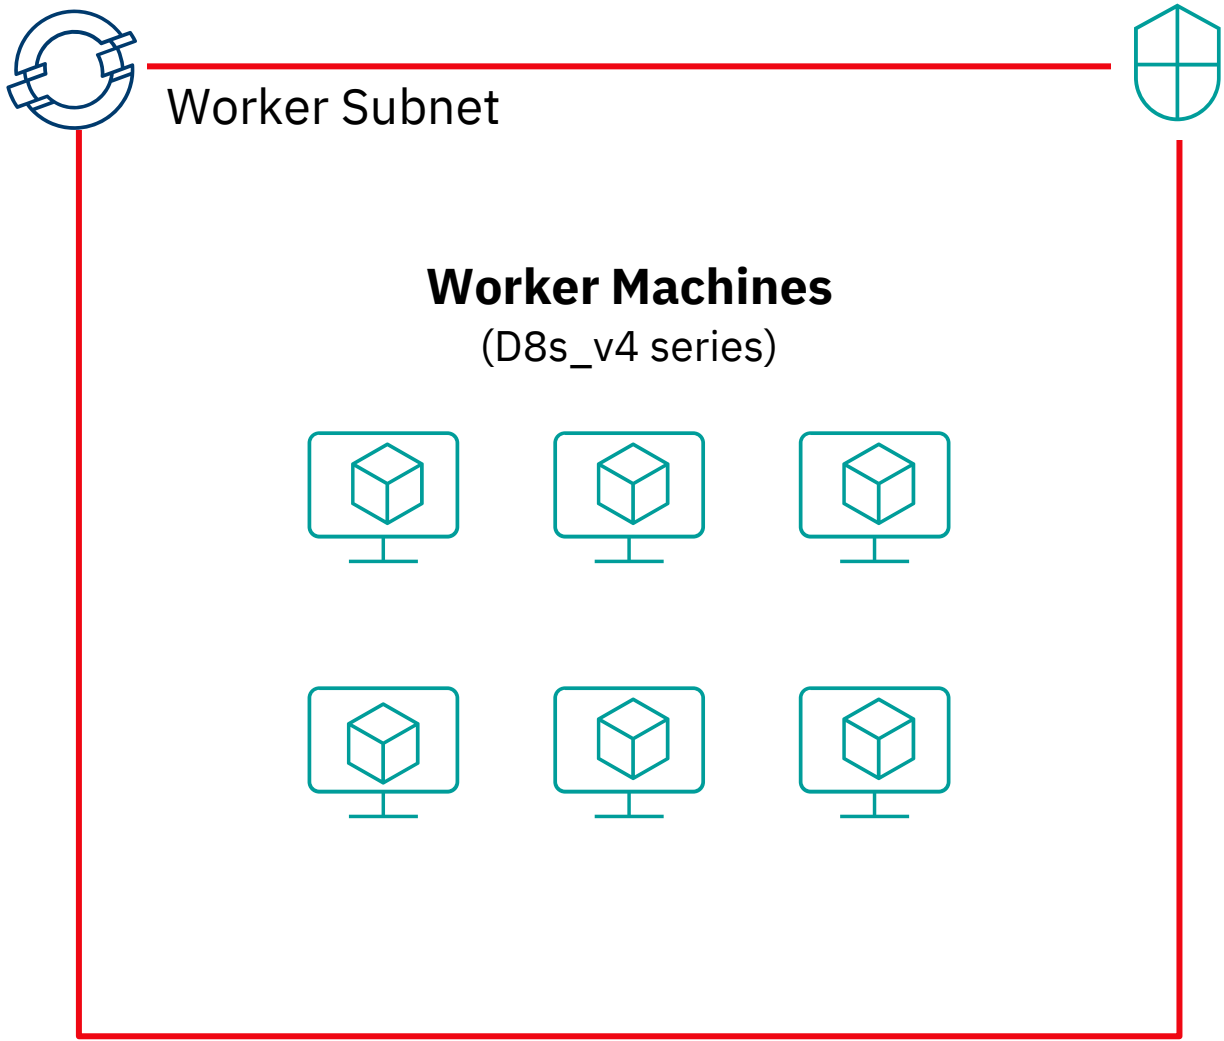

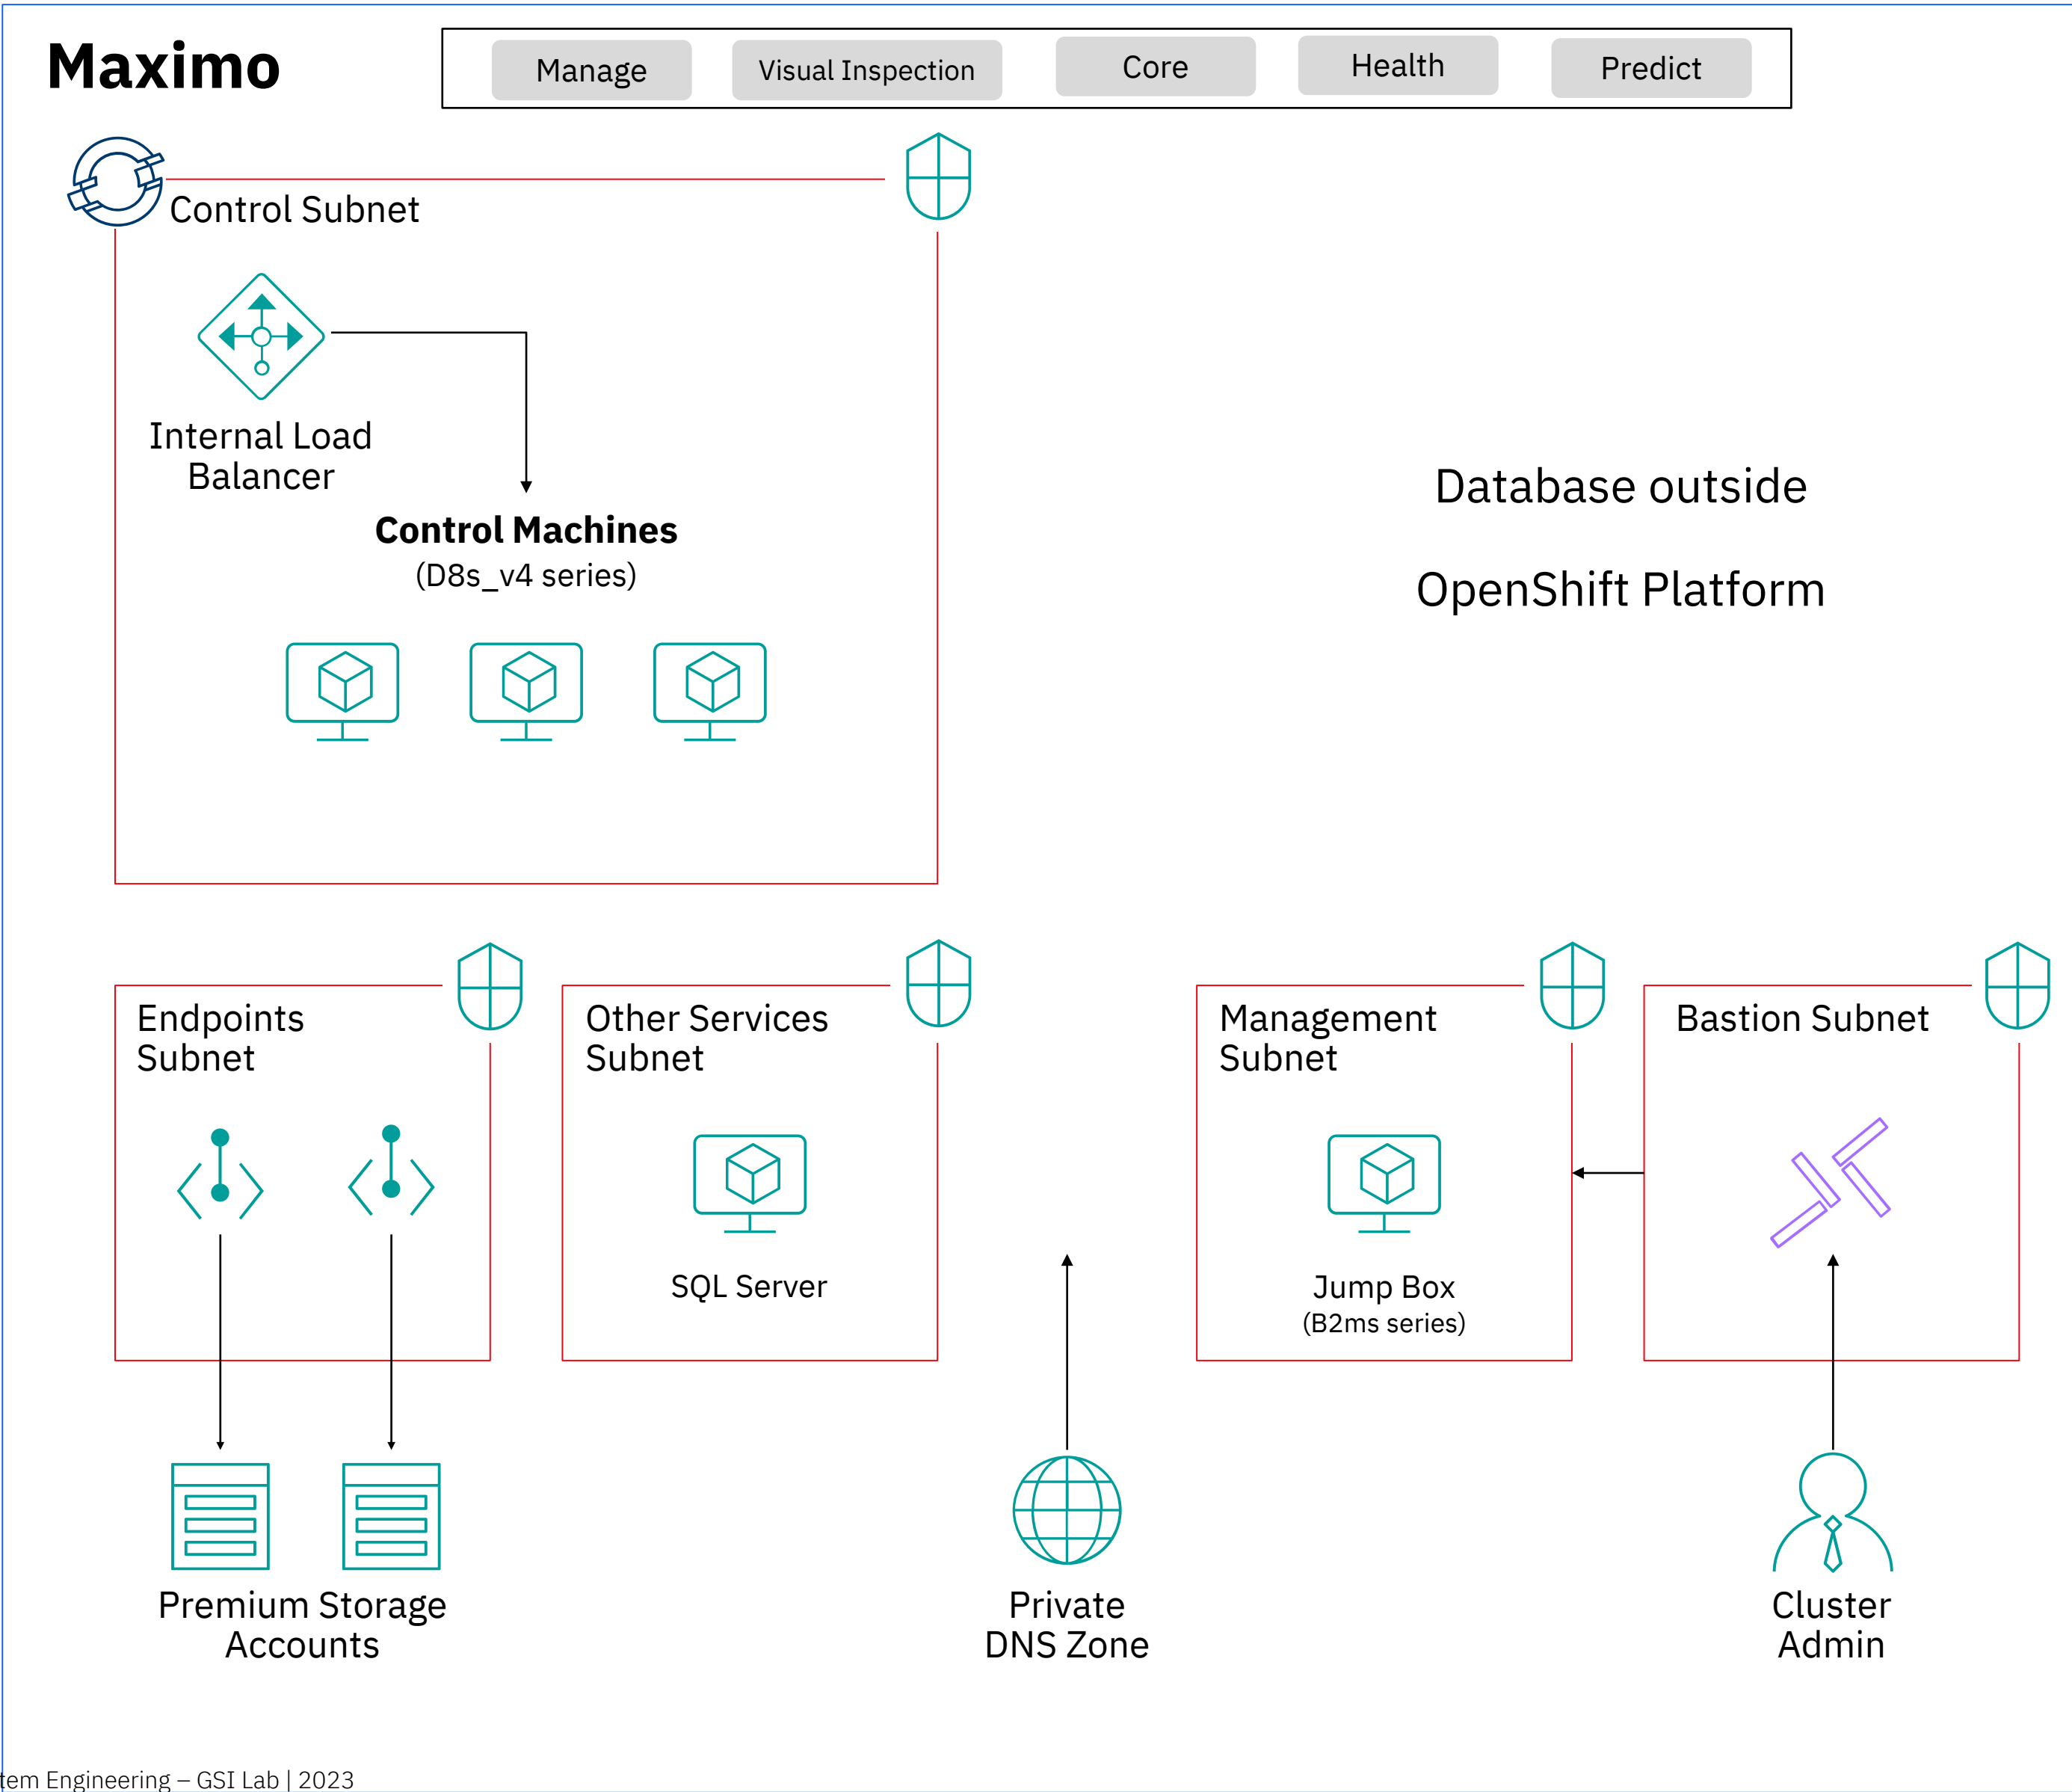

- Finalize a MAS deployment option
- Get an OCP cluster
- Pre-migration checks/steps in EAM
- Setup CP4d (Optional)
- DB Migration Steps (Whether to setup db2 on OpenShift *or* CP4D *or* as a Service)
- Setup MAS environment (i.e., Install MAS core) and Manage Operator
- Post Migration steps in MAS

- 1) Setting up Database with-in same OpenShift Platform
- 2) Setting up Database **with-in CP4d** in the same OpenShift Platform
- 3) Setting up Database outside OpenShift platform as Service or On-Prem setup

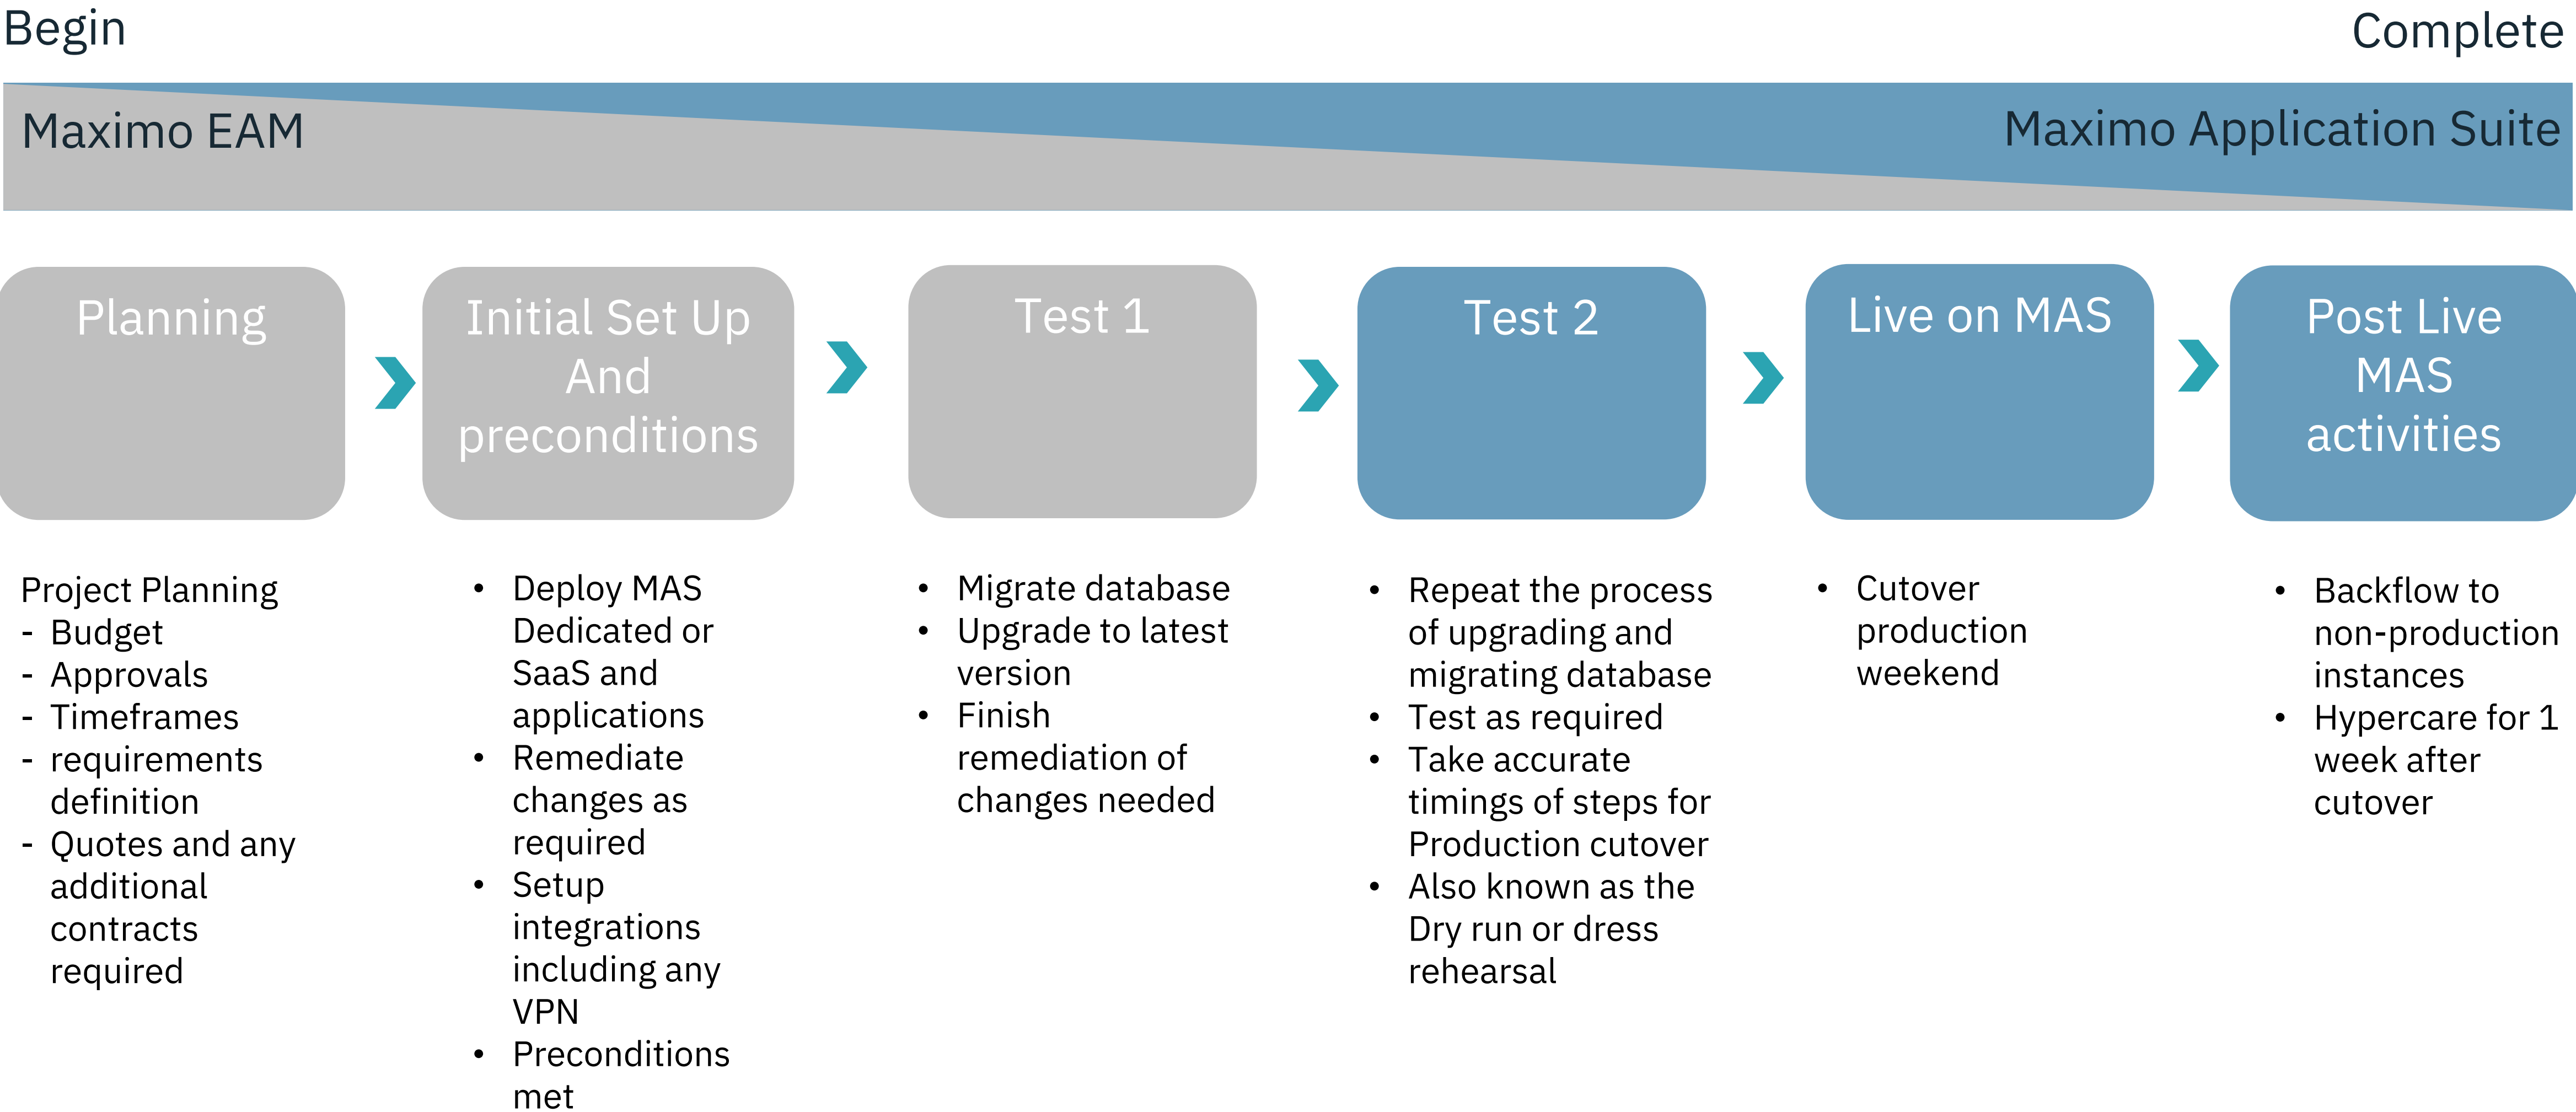

Steps for Migration

Pre-Conditions

- Installation of Maximo Application Suite (Core) along with pre-required modules (mongodb, SAS & UDS)
- Installation of Maximo – Manage (Workspace Deployment) and other modules like ACM, HSE, any other MAS industry solutions and add-on's
- Have a run by “Pre upgrade checklist” and “Pre upgrade users list” and note or validate
- Upgradation of “OpenShift” Cluster in underlying (In case of upgrading previous MAS versions)
- Choosing the “Upgrade Method” of Maximo Application Suite is important, “Channel Subscription” → “Manual Upgrade” & “Channel Subscription”
- Connect to EAM Database from MAS – Manage Workspace and “Activate” from Workspace UI page
- Manage deployment configuration
 - Database
 - Industry Solution selection
 - Server bundle
 - Customization archive
- Verification of “Post upgrade”
- SMTP Setup

Journey to MAS SaaS or MAS Dedicated

Additional Links...

Compatibility Matrix – It is important to get a perspective of latest version of Openshift, operators & sub modules from Compatibility Matrix

<https://pages.github.ibm.com/maximoappsuite/support/compatability-matrix/>

Manage Upgrade

<https://www.ibm.com/docs/en/maximo-manage/continuous-delivery?topic=manage-configuring-maximo-upgrade>

Common Errors...

Cryptox Error — To resolved cryptox key error by following below steps -> <https://www.ibm.com/docs/en/maximo-manage/continuous-delivery?topic=encryption-resetting-crypto-cryptox-fields-in-database>

Jdbc Connection Error — To Fix JDBC connection error in Manage workspace, (Usually it is advisable to have it Manage namespaces)

Maxinst Pod Error → To keep a watch on “*Logs*” section of “*maxinst*” pod. It is important to determine type of errors you would get. Not every time error displays the correct message. Need to look at various options

Custom resource definition (CRD's) → To check possible type of error in “*Instances*” part of CRD's, mainly Manageworkspace, Managedeployment etc

Persistent Volume Claims (PVC's) → To check if all the “*Persistent Volumes*” are bounded to respective storage classes and pods
