

Maximo Mobile v8.x

Agenda

Day - 1

- Overview of Maximo Mobile v8.x
- Maximo Mobile application demonstration
 - Technician Walkthrough
 - Inspection Walkthrough
- Hands-on lab on Mobile OOB application

Day - 2

- Discuss Maximo App Configurator
 - App configurations
 - XML Elements
- Hands-on lab for app configurations
 - Real-life use cases
- Discuss Security access configuration
 - Security Templates

Prerequisites

Skills

- Basic understanding on Maximo (<https://www.ibm.com/training/collection/maximoconsultant>)
- Maximo Corrective Maintenance Badge (<https://learn.ibm.com/course/view.php?id=6431>)
- Other technology skills required:
 - XML
 - JavaScript
 - Docker

Infrastructure

- Must have IBM IDs created to access IBM resources
- Docker ID essential to pull images from IBM repo
- Maximo Mobile environment for hands-on lab (MAS or Maximo EAM 7.6.1.2)
 - Have your own environment (preferred)
 - Reserve an instance from IBM Technology Zone (<https://techzone.ibm.com/collection/maximo-7612-maximo-spatial-761-maximo-mobile-for-eam-87>)
- Workstation with Docker and WSL setup. (OS – Win10/MacOS)
- **Active IBM entitlement key**

Disclaimer

IBM's statements regarding its plans, directions, and intent are subject to change or withdrawal without notice at IBM's sole discretion.

Information regarding potential future products is intended to outline our general product direction and it should not be relied on in making a purchasing decision.

The information mentioned regarding potential future products is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Information about potential future products may not be incorporated into any contract. The development, release, and timing of any future features or functionality described for our products remains at our sole discretion.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.

Maximo Mobile

Next generation user experience

1 application, 1 role-based interface

Intelligent workflows = blue button

Intelligent forms = configurability

Connected and disconnected

Trustworthiness: data quality is higher, and real-time updates

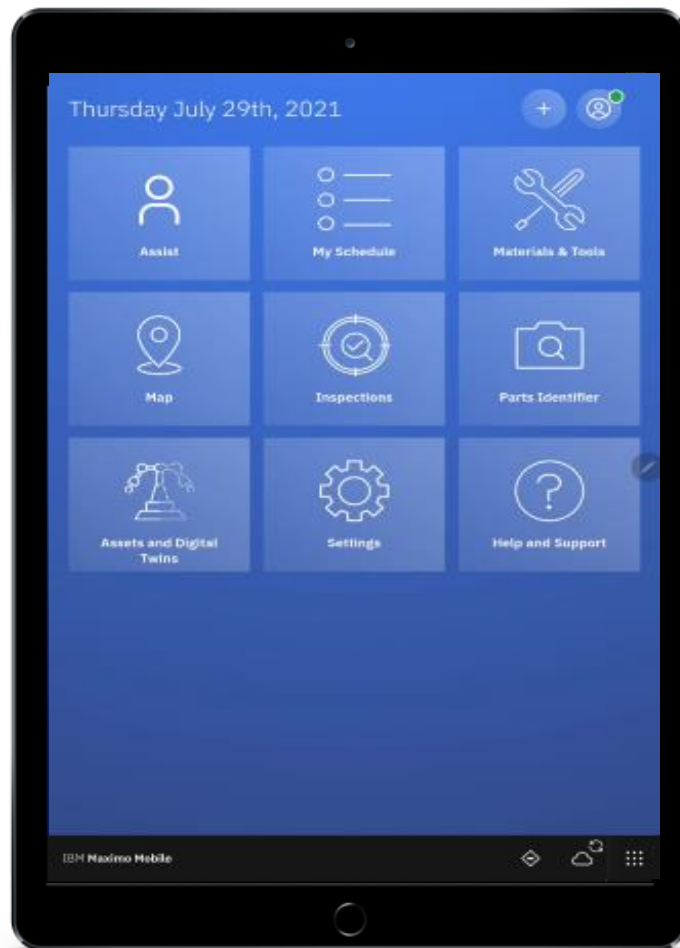

Downloadable from:

Apple App
Store

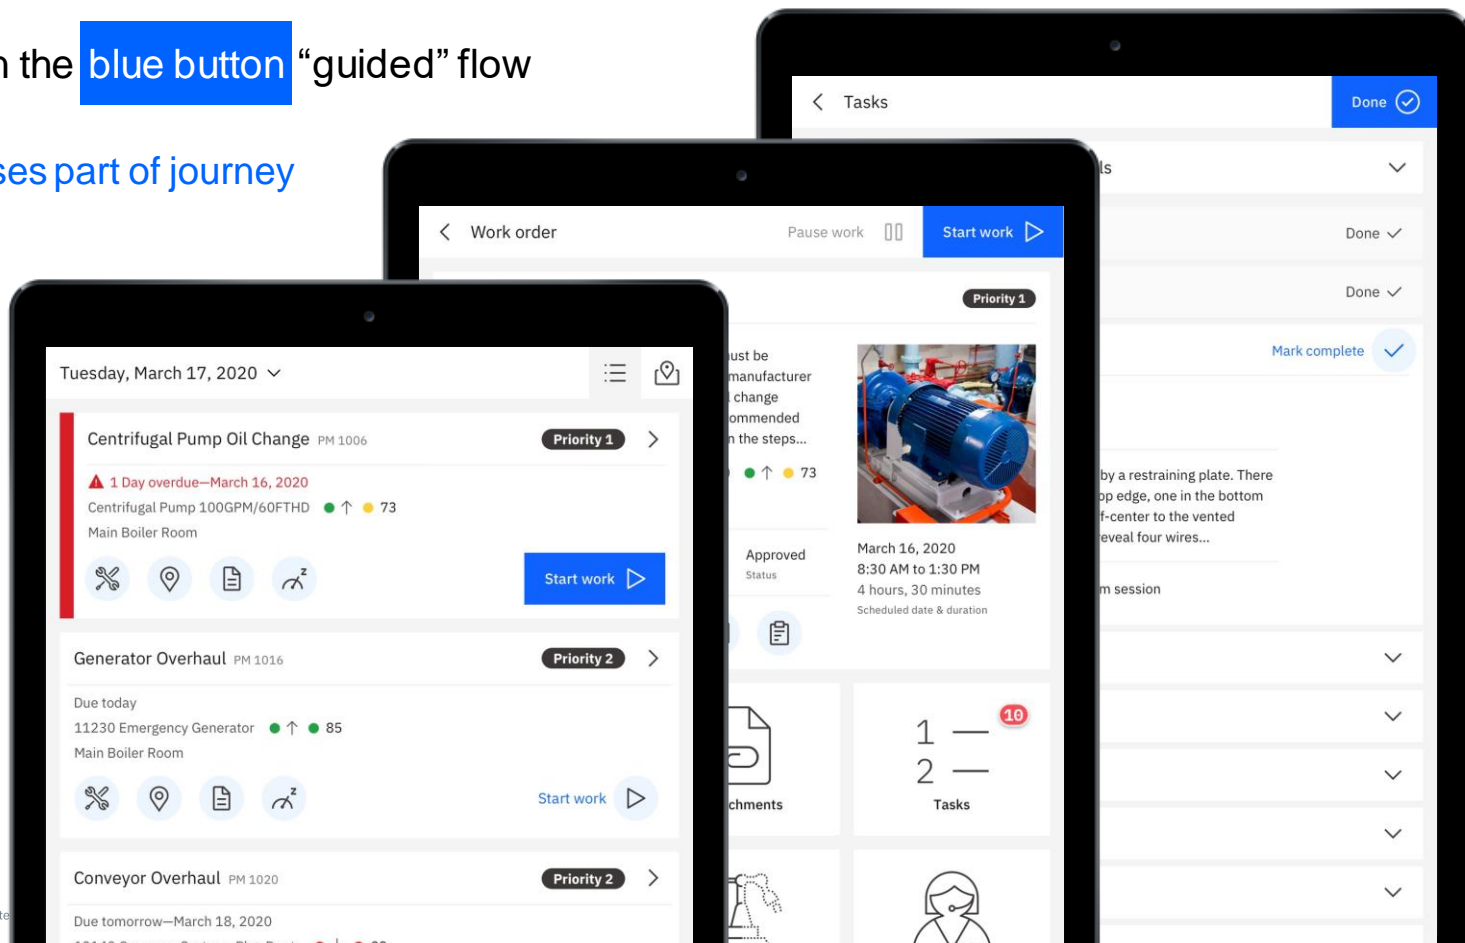

Google Play
Store

Simplicity

Just click on the **blue button** “guided” flow

New use cases part of journey

Touchpoints

Configuration

Drive efficiency at scale

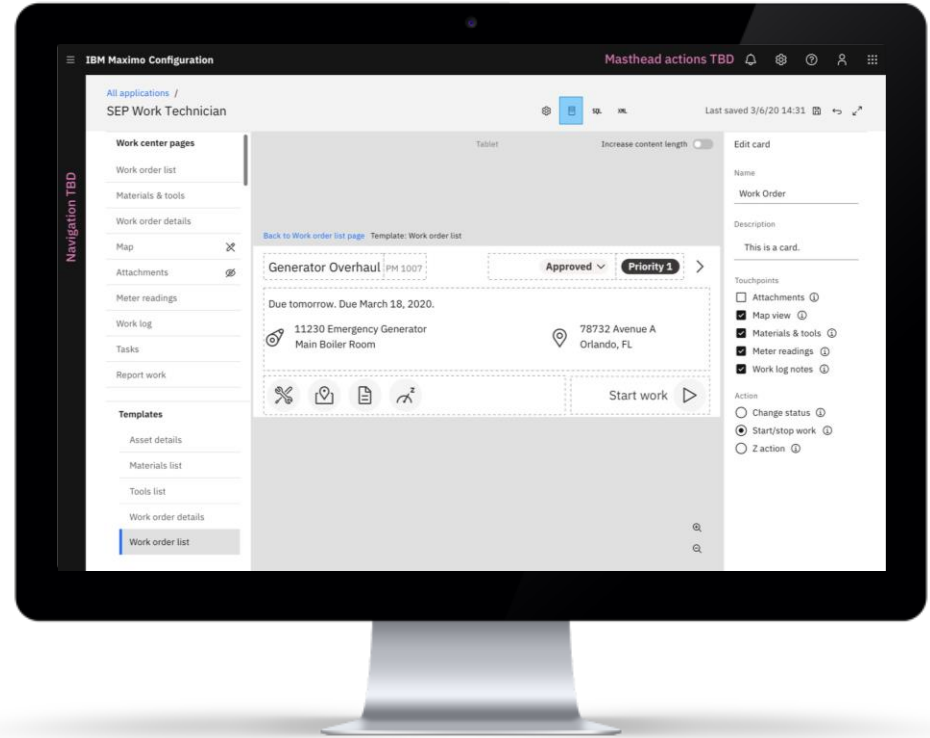

Accelerate technician adoption

Protect your investment

Quicker time to value

This is not just a work order application

Upskill with AI and remote human-based assistant

Disconnected mode

True mobile native

Use AI to identify assets and parts immediately and correctly

Digital twin and parts identification

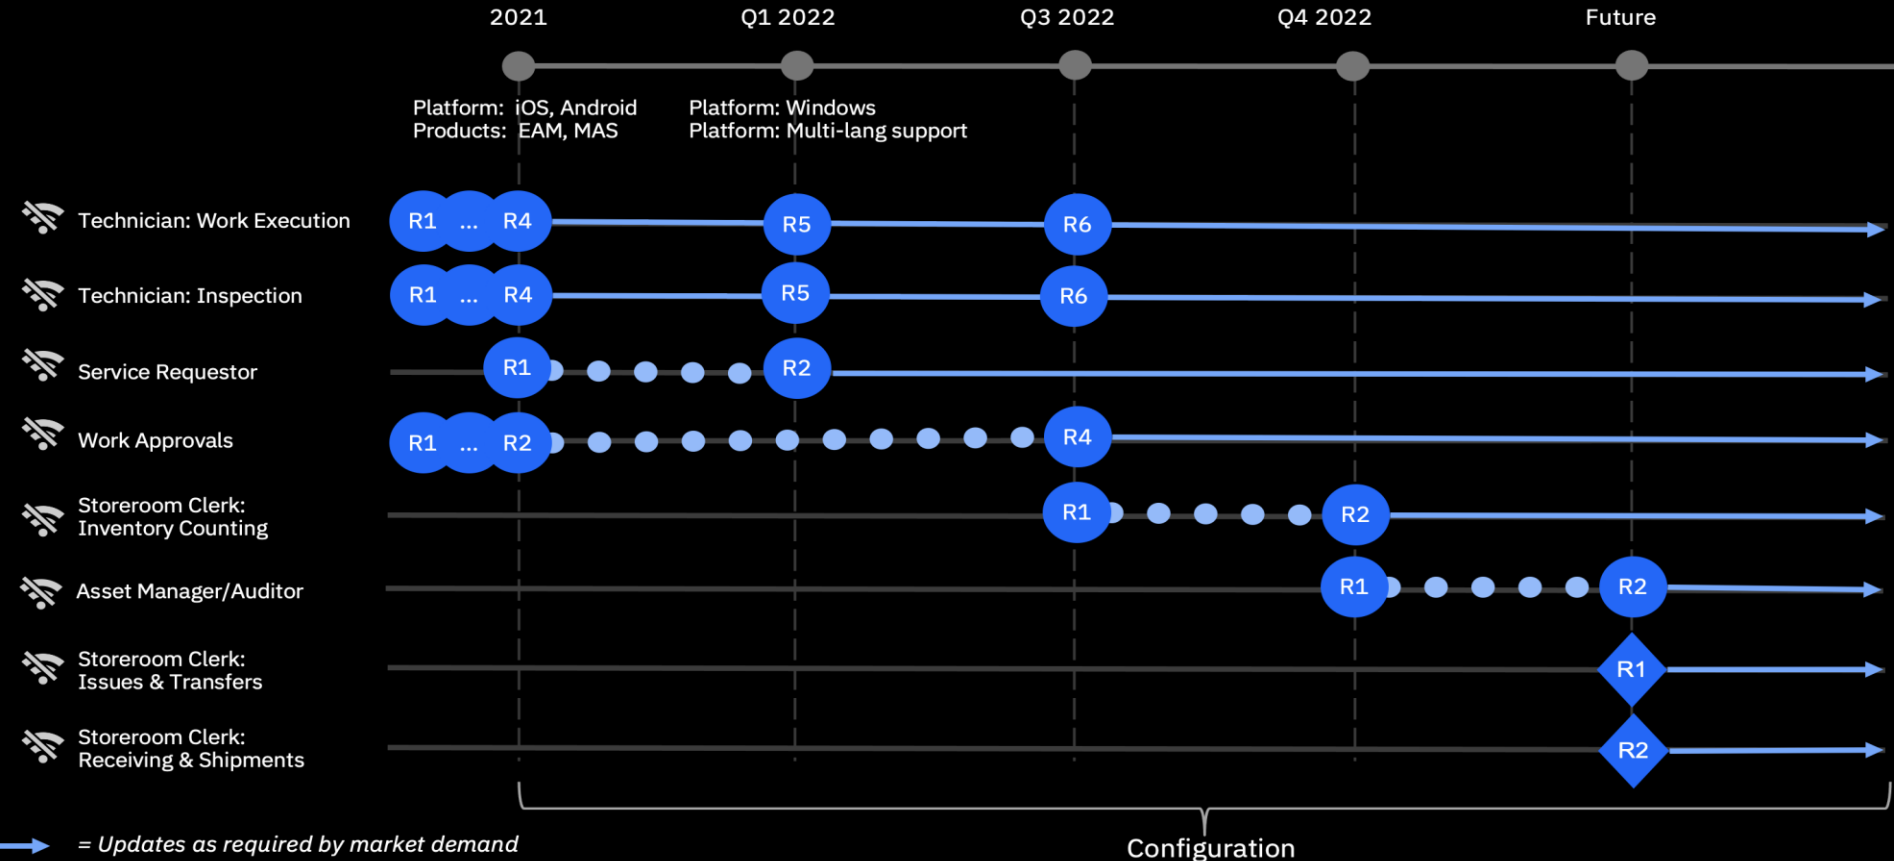

Why Maximo Mobile?

- Improve technician productivity
- Boost first time fix rates
- Reduce mean time to repair
- Reduce training costs
- Reduce troubleshooting time
- Increase asset availability
- Reduced overall maintenance costs
- Improve data quality and reporting

Roadmap to Expand Maximo Mobile

Roadmap to Expand Technician: Work Execution and Approvals

Technician: Work

2021

Feb 2022

July 2022

Nov 2022

Future

R1

...

R4

R5

R6

Platform: iOS, Android

- Access to multiple work views
- Change status of WO
- Check off issued materials and tools
- Confirm asset on a work order via barcode or Qrcode scan
- Create/edit work
- Create follow-up work
- Enter meter readings
- Launch inspections
- Navigate to work
- Report failures
- Report labor time
- Issue materials actuals
- Material requests
- Report Asset status
- Filter work
- Multi-asset/location
- Start/stop/pause timer
- View and complete tasks
- View planned materials and tools
- Viewing attachments and adding photos
- Work logs

- Physical signature
- Enhanced labor reporting
- Tool actuals
- View asset and location work history
- Report downtime

Maps

- View my location
- X, Y conversion for navigation
- Online/Offline maps
- Capture GPS
- Identify feature capabilities

Maximo Application Suite

only:

- AI tooling
- Part identifier

Assist

- Launch Assist (navigator, work order, and tasks)

- Server side configurations for:
 - Field completion status
 - Status to collect signature
 - Usage of timer
- Asset and location lookups for work order create/edit
- Work log type
- Support for task assignments, as well as to report actuals in the task level
- Issue materials from reserved items

Maximo Application Suite only:

- Support for push notifications

- Enhanced offline database support
- Drill down in a WO hierarchy
- Details around historical work orders
- Support for flow control
- Safety Plans / Hazards and Precautions support

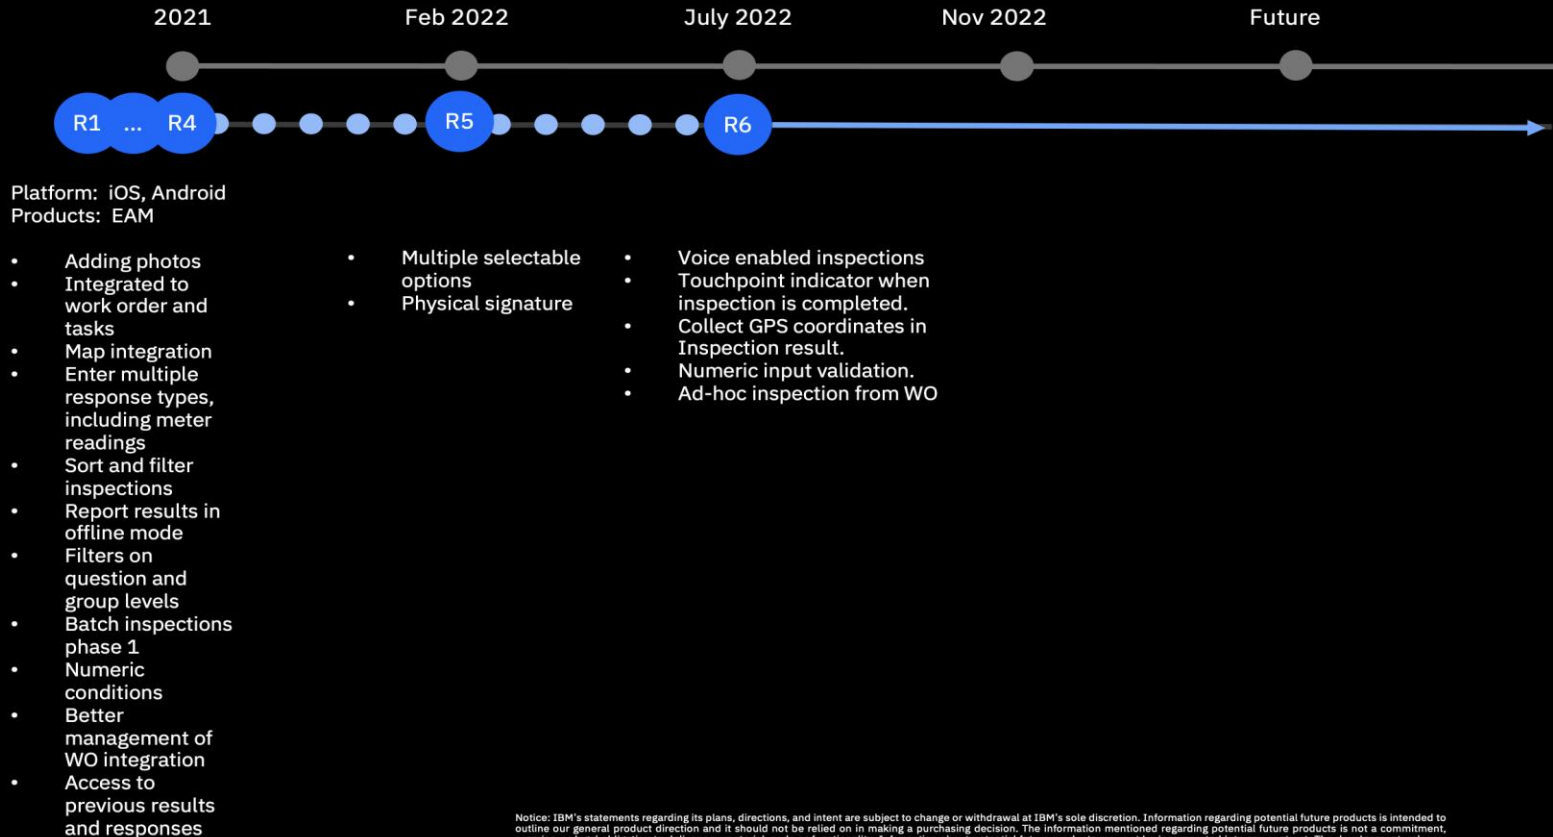

- Calibration WOs
- Workflow integration

Notice: IBM's statements regarding its plans, directions, and intent are subject to change or withdrawal at IBM's sole discretion. Roadmap to Expand Technician: Service Requestor

Platform:

iOS, Android, Windows

Products:

Manage, EAM

R1 – October 2021

- Create new Service Requests
 - Select in category/subcategory
 - Capture photo/video during creation
 - Cancel new Service Requests
- View Active Service Requests
 - Add comments
 - Add attachments
- View Completed Service Requests History

R2 – February 2022

- Select Asset/Location
 - Searching
 - Bar/QR code scanning
 - Selecting from Map
 - **Web Only** – Advanced Filtering
- Common request types selection driven off request category
- Follow-up questions driven off common request type

Future

- Offline maps
- Show nearby
- Capture GPS
- Work log type
- Drill down selection for Assets/Location
- **Mobile only** – Advanced filtering for Asset / Location
- Quick filtering – My Assets/Locations
- Owner groups assignment displayed for active request
- Guest service requests
- Self-service user registration
- Configurable hub flow
- Follow-up questions with table domains
- Follow-up questions with radio buttons
- Cleanup result set columns

Maximo Application Suite only:

- Support for push notifications

Notice: IBM's statements regarding its plans, directions, and intent are subject to change or withdrawal at IBM's sole discretion. Information regarding potential future products is intended to outline our general product direction and it should not be relied on in making a purchasing decision. The information mentioned regarding potential future products is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Information about potential future products may not be incorporated into any contract. The development, release, and timing of any future features or functionality described for our products remains at our sole discretion.

Roadmap to Expand Storeroom Clerk: Inventory Counting

Storeroom Clerk:
Inventory Counting

Platform:

iOS, Android, Windows

Products:

Manage Only

2021

Feb 2022

July 2022

Nov 2022

Future

R1

R2

R1 – July 2022

- New Manage Inventory Count Book application
 - Create count books and group items for counting
 - Define count tolerances f
 - Reconcile inventory balance
- New Mobile Inventory Counting app
 - Perform physical counts of count books items
 - Connected/Disconnected
 - Preview count variances
 - Reconcile counts
 - Mismatch alters and recount options for more accurate counts
- Support customer RFE
 - Count books for Manage
 - MASM-I-314 - Allow physical count for assets in inventory
 - MASM-I-556 – Easy method to recount
 - MASM-I-Cycle counting batch

R2 –November 2022

Notice: IBM's statements regarding its plans, directions, and intent are subject to change or withdrawal at IBM's sole discretion. Information regarding potential future products is intended to outline our general product direction and it should not be relied on in making a purchasing decision. The information mentioned regarding potential future products is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Information about potential future products may not be incorporated into any contract. The development, release, and timing of any future features or functionality described for our products remains at our sole discretion.

Hands-On Exercise #1

Client Story

M-Energy Inc is a crude oil drilling and extraction company having oil rigs and refineries across the globe. They are using Maximo EAM to manage, track and maintain their assets. They are planning to expand their business into offshore drilling, and they are looking for offline Maximo Work Management capabilities for their offshore rigs. They are also looking forward to incorporate inspection capabilities along with work management.

Hands-On Contd.

Use Maximo Mobile to demonstrate the following:

1. Download and install Maximo Mobile on a mobile device
2. Login to access the Work Order data
3. Associate an asset or a location to an existing Workorder
4. Perform an inspection in Maximo Mobile
5. Request for materials from Maximo Mobile
6. Complete tasks of a Workorder
7. Add meter readings
8. Complete a WO
9. Create a follow-up WO
10. Create an SR

MAF Visual Configuration Tool

We've built the "MAF Configuration Application" (aka the Config-App) to provide visual configuration functionality for Graphite applications

The Config-App allows us to:

- Configure applications using an xml editor
- Easily edit, duplicate and delete applications
- Drive MAS adoption and sales

Target audience includes:

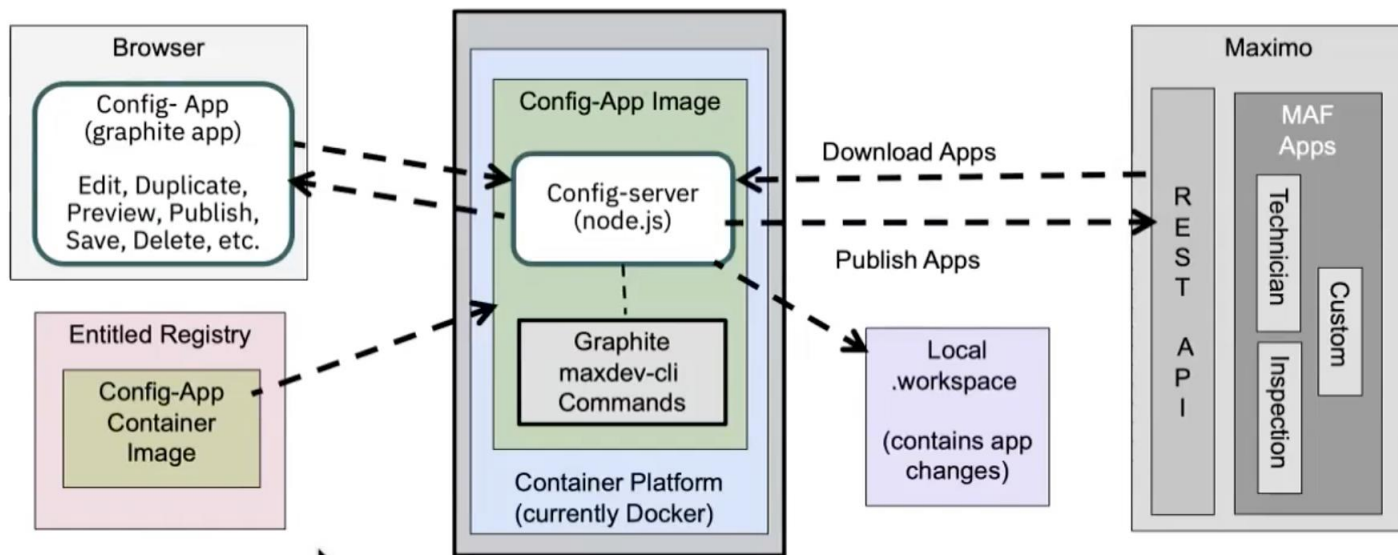

- Customers (technical and non-technical)
- Business partners
- IBM Application Developers & Designers

Customers and business partners are using it today:

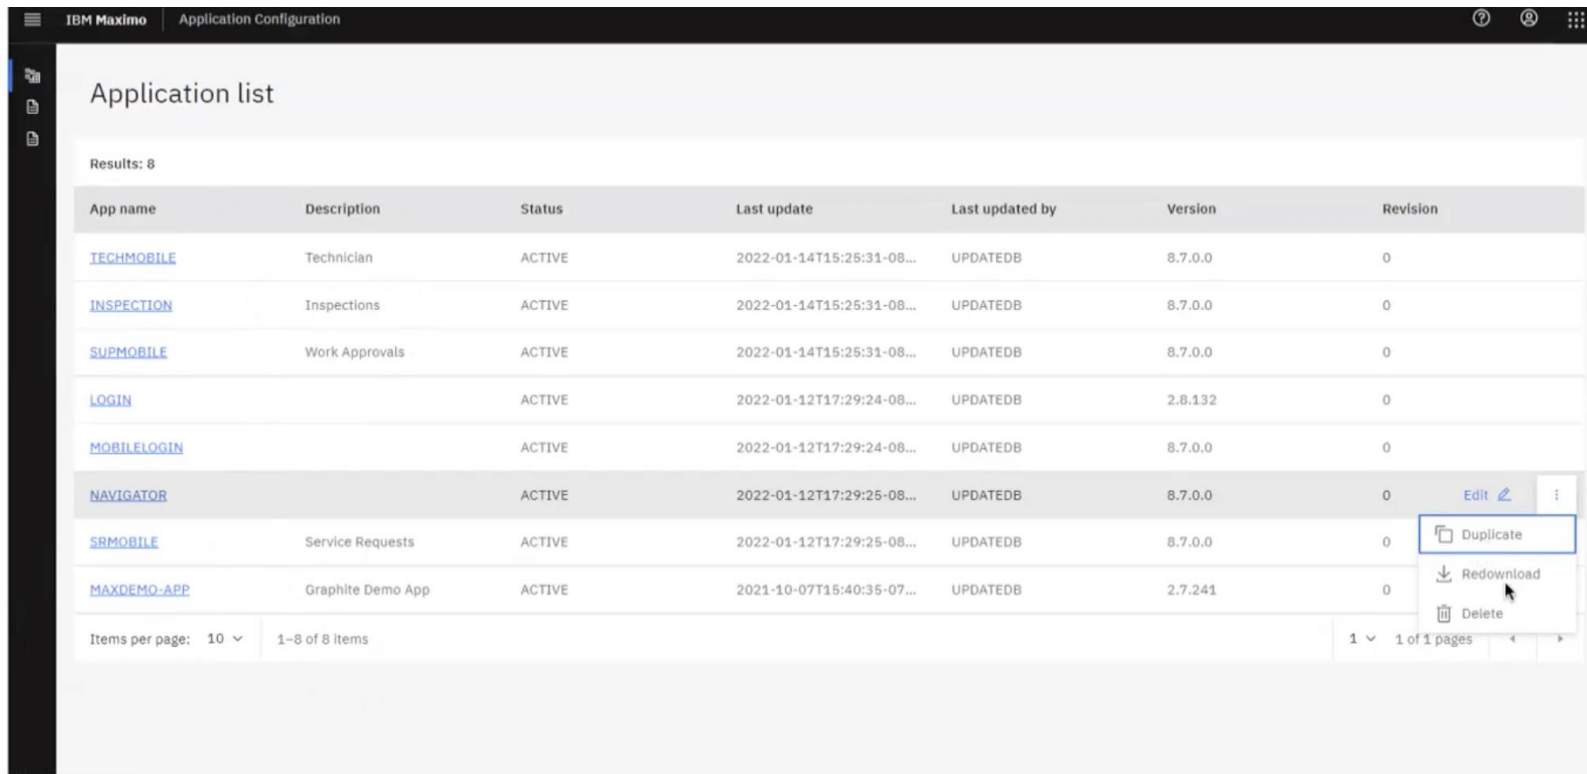

- Woolworth's, John Wayne Airport, Coca Cola, Sund & Baelt, BoM, Gelnex, Sandvik, Targa, Highstep, Migros, SoCalGas, etc.

How does it work?

The Config-App is currently deployed as a self-contained Docker image with everything it needs to configure a Graphite application.

Maximo Mobile – App Configurations and Customizations

Setup development workstation

1. Ensure you have docker service setup on your system
2. Ensure you have an IBM Entitlement key to fetch the docker image for MAF
3. If using a Windows system, setup WSL and get a Linux environment to run on Windows
4. Login and download the MAF docker image into your local registry
5. Use the docker run command to access the MAF tool in your browser

Hands-On Exercise #2

Client Requirements

1. Edit a label
2. Add a new field
3. Change existing fields
4. Change color of a field based on a condition
5. Hiding an XML element based on a signature option
